Design the Interface

#mcaTravels

@mamund

#perth2018

“ Few people think about it or are aware of it. But there is nothing made by human beings that does not involve a design decision somewhere.”

Bill Moggridge
Interaction Design Pioneer

Functionality, Usability, and User Experience: Three Areas of Concern

Niamh McNamara | University College Cork, Ireland | n.mcnamara@ucc.ie

Jurek Kirakowski | University College Cork, Ireland | jzk@ucc.ie

design

Functionality

Usability

Experience

A stack of four slices of golden-brown toast is presented on a dark wooden toast rack. The toast has a slightly textured, porous appearance. The rack is placed on a light-colored table. In the background, a white bowl, a folded white napkin, and a silver spoon are visible, suggesting a dining setting. The word "toast" is overlaid in a large, yellow, sans-serif font.

Design Guidelines

- Craft [good/pretty/usable/stable] URIs

#mcaTravels

@mamund

#perth2018

Term	Description
Authority	A URI component that identifies the party with jurisdiction over the namespace defined by the remainder of the URI.
Collection	A resource archetype used to model a server-managed <i>directory</i> of resources.
Controller	A resource archetype used to model a procedural concept.
CRUD	An acronym that stands for the four classic storage-oriented functions: create, retrieve, update, and delete.
Developer portal	A Web-based graphical user interface that helps a REST API acquire new clients.
Docroot	A resource that is the hierarchical ancestor of all other resources within a REST API's model. This resource's URI should be the advertised entry point.
Document	A resource archetype used to model a singular concept.
Forward slash separator (/)	Used within the URI path component to separate hierarchically related resources.
Opacity of URIs	An axiom, originally described by Tim Berners-Lee, that governs the visibility of a resource identifier's composition.
Parent resource	The document, collection, or store that governs a given subordinate concept by preceding it within a URI's hierarchical path.
Query	A URI component that comes after the path and before the optional fragment.
Resource archetypes	A set of four intrinsic concepts (document, collection, store, and controller) that may be used to help describe a REST API's model.
Store	A resource archetype used to model a client-managed resource repository.
URI path segment	Part of a resource identifier that represents a single node within a larger, hierarchical resource model.
URI template	A resource identifier syntax that includes variables that must be substituted before resolution.

Design Guidelines

- Craft [good/pretty/usable/stable] URIs
- Map domain actions to HTTP methods (CRUD)

#mcaTravels

@mamund

#perth2018

Term	Description
DELETE	HTTP request method used to remove its parent.
GET	HTTP request method used to retrieve a representation of a resource's state.
HEAD	HTTP request method used to retrieve the metadata associated with the resource's state.
OPTIONS	HTTP request method used to retrieve metadata that describes a resource's available interactions.
POST	HTTP request method used to create a new resource within a collection or execute a controller.
PUT	HTTP request method used to insert a new resource into a store or update a mutable resource.
Request-Line	RFC 2616 defines its syntax as Method SP Request-URI SP HTTP-Version CRLF
Request method	Indicates the desired action to be performed on the request message's identified resource.
Response status code	A three-digit numeric value that is communicated by a server to indicate the result of a client's request.
Status-Line	RFC 2616 defines its syntax as: HTTP-Version SP Status-Code SP Reason-Phrase CRLF
Tunneling	An abuse of HTTP that masks or misrepresents a message's intent and undermines the protocol's transparency.

Design Guidelines

- Craft [good/pretty/usable/stable] URIs
- Map domain actions to HTTP methods (CRUD)
- Use the proper HTTP Status Codes

#mcaTravels

@mamund

#perth2018

Code	Name	Meaning
400	Bad Request	Indicates a nonspecific client error
401	Unauthorized	Sent when the client either provided invalid credentials or forgot to send them
402	Forbidden	Sent to deny access to a protected resource
404	Not Found	Sent when the client tried to interact with a URI that the REST API could not map to a resource
405	Method Not Allowed	Sent when the client tried to interact using an unsupported HTTP method
406	Not Acceptable	Sent when the client tried to request data in an unsupported media type format
409	Conflict	Indicates that the client attempted to violate resource state
412	Precondition Failed	Tells the client that one of its preconditions was not met
415	Unsupported Media Type	Sent when the client submitted data in an unsupported media type format
500	Internal Server Error	Tells the client that the API is having problems of its own

Design Guidelines

- Craft [good/pretty/usable/stable] URIs
- Map domain actions to HTTP methods (CRUD)
- Use the proper HTTP Status Codes
- Document serialized objects as HTTP bodies

#mcaTravels

@mamund

#perth2018

Term	Description
Field	A named slot with some associated information that is stored in its value.
Form	A structured representation that consists of the fields and links, which are defined by an associated schema.
Format	Describes a form's presentation apart from its schematic.
Link	An actionable reference to a resource.
Link formula	A boolean expression that may serve as HATEOAS calculator's input in order to determine the availability of state-sensitive hypermedia within a form.
Link relation	Describes a connection between two resources.
Schema	Describes a representational form's structure independent of its format.
State fact	A Boolean variable that communicates a condition that is relevant to some state-sensitive hypermedia.

Design Guidelines

- Craft [good/pretty/usable/stable] URIs
- Map domain actions to HTTP methods (CRUD)
- Use the proper HTTP Status Codes
- Document serialized objects as HTTP bodies
- Use HTTP headers responsibly

#mcaTravels

@mamund

#perth2018

Code	Purpose
Content-Type	Identifies the entity body's media type
Content-Length	The size (in bytes) of the entity body
Last-Modified	The date-time of last resource representation's change
ETag	Indicates the version of the response message's entity
Cache-Control	A TTL-based caching value (in seconds)
Location	Provides the URI of a resource

Design Guidelines

- Craft [good/pretty/usable/stable] URIs
- Map domain actions to HTTP methods (CRUD)
- Use the proper HTTP Status Codes
- Document serialized objects as HTTP bodies
- Use HTTP headers responsibly
- Describe edge cases (async, errors, authN/Z)

 oauth_timestamp=1258308730,
 oauth_version=1.0 ❷

Content-Length: 0

Response containing a request token and a secret

HTTP/1.1 200 OK

Content-Type: application/x-www-form-urlencoded

oauth_token=0e713d524f290676de8aff4073b1bb52e37f065c

&oauth_token_secret=394bc633d4c93f79aa0539fd554937760f05987c ❸

Four Step API Design Method

#mcaTravels

@mamund

#perth2018

An API Design Methodology

A repeatable process to govern the creation of interfaces

- Produce a Service Canvas
- Draw a Diagram
- Apply Vocabularies
- Create Description Document

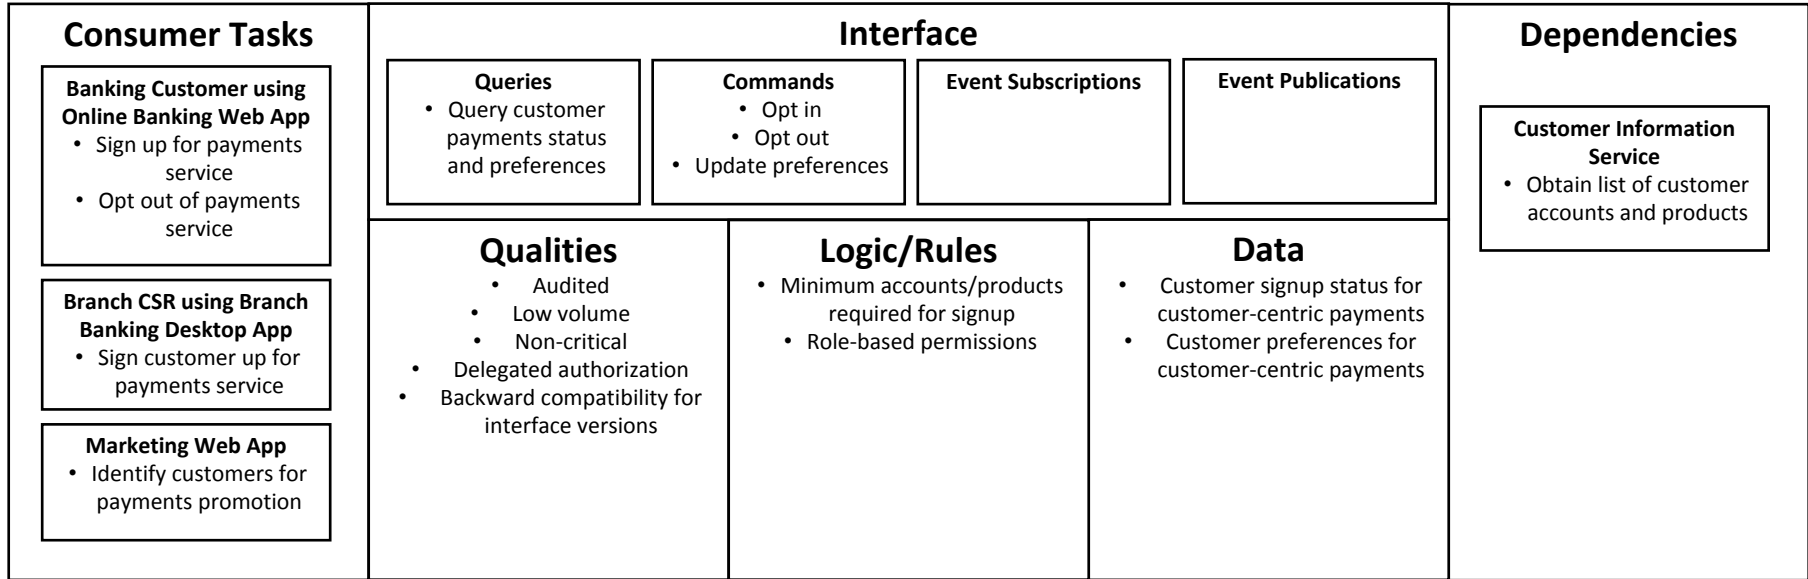

```
1 <!DOCTYPE html>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="/accounts/{accountId}" />
8 </descriptor>
9 <descriptor id="updatePreferences" type="idempotent">
10   <descriptor href="/accounts/{accountId}" />
11   <descriptor href="/preferences/{preference}" />
12 </descriptor>
13 </structures -->
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="/hiddenfield" />
17   <descriptor href="/value" />
18   <descriptor href="/name" />
19 </descriptor>
```

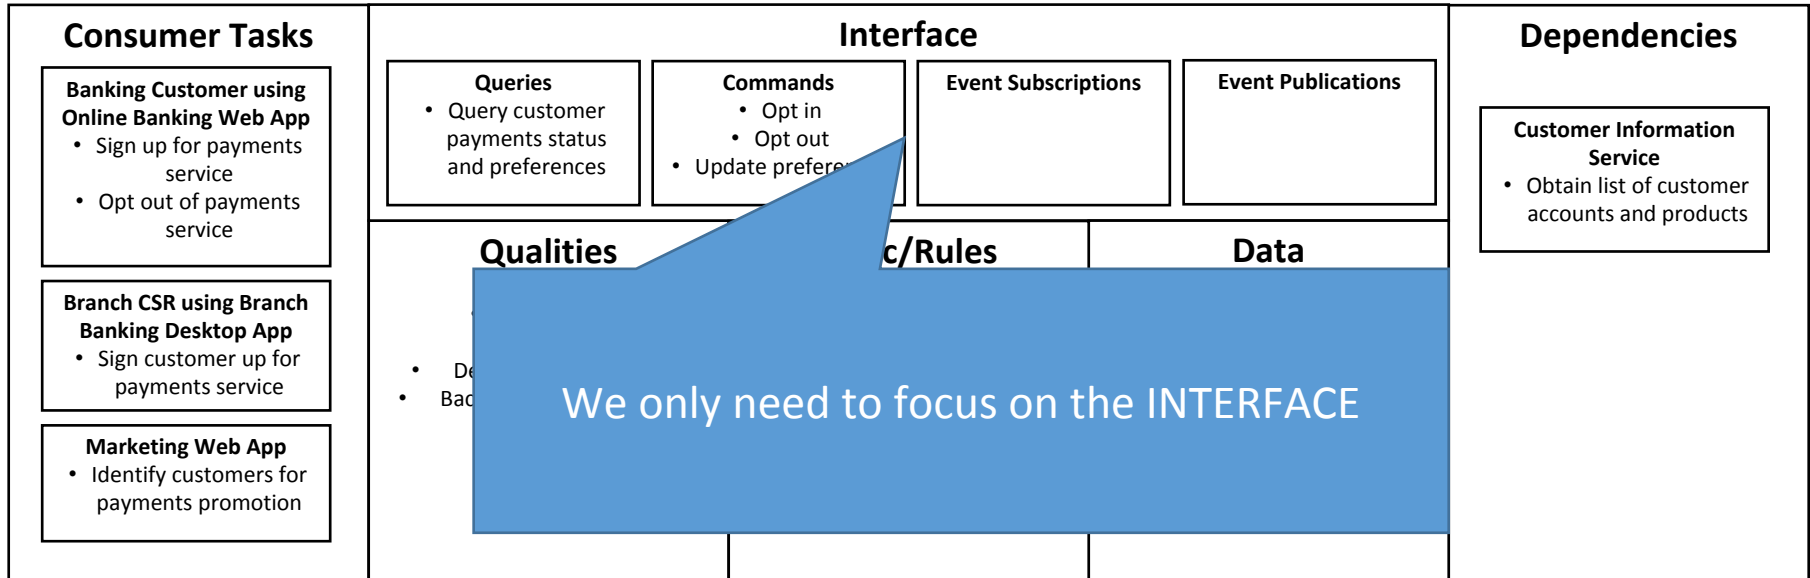

Produce a Service Canvas

```
1 <alps>
2   <doc>Simple Banking Example</doc>
3   <!-- actions -->
4   <descriptor id="getList" type="safe" />
5   <descriptor id="getStatus" type="safe" />
6   <descriptor id="updateStatus" type="idempotent">
7     <descriptor href="#accountId" />
8     <descriptor href="#actionStatus" />
9   </descriptor>
10  <descriptor id="updatePreferences" type="idempotent">
11    <descriptor href="#accountId" />
12    <descriptor href="#apreference" />
13  </descriptor>
14  <!-- structures -->
15  <descriptor id="preference" type="semantic">
16    <descriptor href="#idenfittier" />
17    <descriptor href="#avalue" />
18    <descriptor href="#aname" />
19  </descriptor>
```

Design Canvas: Customer-centric Payments Management Service

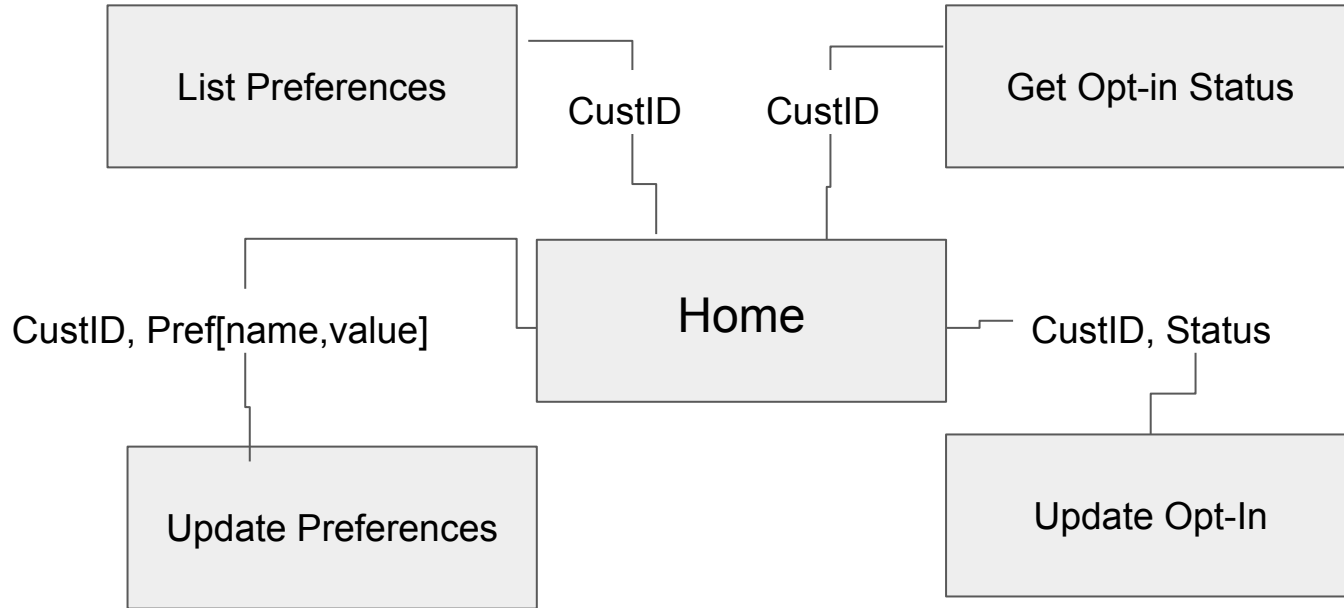

List all the Actions

Draw a Diagram

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#idenfiter" />
17   <descriptor href="#avalue" />
18   <descriptor href="#aname" />
19 </descriptor>
```

Apply Vocabularies

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#identifier" />
17   <descriptor href="#value" />
18   <descriptor href="#name" />
19 </descriptor>
```

Sources for Vocabularies

- IANA Link Relation Values
- schema.org
- microformats
- Dublin Core
- Activity Streams
- Industry Vocabularies (BIAN, etc.)
- Your Enterprise Vocabularies

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#identifier" />
17   <descriptor href="#value" />
18   <descriptor href="#name" />
19 </descriptor>
```

Before Applying Vocabularies

- CustID,
- CustomerName,
- AccountName,
- AccountType
- Optin-Status(in, out)
- Preference(Name, Value, Prompt)
- GetStatus
- GetPreferences
- UpdateStatus
- UpdatePreferences

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#idenfittier" />
17   <descriptor href="#avalue" />
18   <descriptor href="#aname" />
19 </descriptor>
```

After Applying Vocabularies

- `BankAccount.identifier`,
- `Customer.familyName`,
- `Customer.givenName`,
- `BankAccount.name`,
- `BankAccount.category`
- `ActionStatus("in", "out")`
- `ItemList(identifier, value, name)`
- **GetStatus**
- **GetPreferences**
- **UpdateStatus**
- **UpdatePreferences**

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#identifier" />
17   <descriptor href="#value" />
18   <descriptor href="#name" />
19 </descriptor>
```

Create a Description Document

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#identifier" />
17   <descriptor href="#value" />
18   <descriptor href="#name" />
19 </descriptor>
```

Description vs. Definitions

- Describing the interface doesn't define it.
- Description languages
 - ALPS
 - DCAP
 - JSON Home

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
6 <descriptor id="updateStatus" type="idempotent">
7   <descriptor href="#accountId" />
8   <descriptor href="#actionStatus" />
9 </descriptor>
10 <descriptor id="updatePreferences" type="idempotent">
11   <descriptor href="#accountId" />
12   <descriptor href="#preference" />
13 </descriptor>
14 <!-- structures -->
15 <descriptor id="preference" type="semantic">
16   <descriptor href="#identifier" />
17   <descriptor href="#value" />
18   <descriptor href="#name" />
19 </descriptor>
```

Description vs. Definitions

- Describing the interface doesn't define it.
- Description languages
 - ALPS
 - DCAP
 - JSON Home
- Definition languages
 - WSDL
 - Swagger
 - RAML
 - Blueprint

```
1 <alps>
2 <doc>Simple Banking Example</doc>
3 <!-- actions -->
4 <descriptor id="getList" type="safe" />
5 <descriptor id="getStatus" type="safe" />
